UN VOLUNTEER DESCRIPTION OF ASSIGNMENT

Id 1784888021273807
Opportunity Type (Online/Onsite) Online
Opportunity Title MoralityCode App Evolution: Phase 2 Development and System Improvements

UN VOLUNTEER DESCRIPTION OF ASSIGNMENT

Host Entity	Action Lab For Development Association
Country of Assignment	Canada
Number of UN Volunteers	3
Sustainable Development Goal	4. Quality education
How many hours per week will the volunteer be needed?	6 - 10 hours per week
Duration	12 week(s)
Task Type	App and software development

DOA Details

Organisation mission and objectives	Action Lab for Development is dedicated to advancing education, food security, and advocacy to empower entrepreneurs, newcomers and promote creative economies in Canada. We envision a future where local innovators and newcomers have the resources to thrive through growth and development. Our mission includes five key objectives: We provide tools and opportunities for creative innovation and entrepreneurship, focusing on continuous improvement. We enable networking and training activities to connect entrepreneurs, institutions, and partners. We educate entrepreneurs and newcomers about fair business practices and social responsibility. We guide emerging entrepreneurs in understanding social and business ecosystems through essential skills and techniques. We encourage youth involvement in volunteering and ensure universal access to research and education by building digital platforms for community knowledge and supporting local ingenuity. Action Lab For Development was registered as an Extra-Provincial Corporation in Alberta-Canada in 2024, granted special consultative status by the United Nations Economic and Social Council in 2020, reflecting our commitment to the UN's Sustainable Development Goals. Our primary focus areas include: • Food Security • Advocacy • Education • These initiatives aim to positively impact local innovators, including newcomers in Canada who may be facing challenges related to integration into a new environment and starting life. Our research shows that access to education, particularly in social entrepreneurship, is a powerful tool for these individuals. It enables them to turn their experiences into practical solutions that benefit their communities.

Assignment context	Born from a journey of trauma, healing, and spiritual awakening, MoralityCode Mobile App is a pioneering ethical decision-making tool designed to fill the emotional and moral gaps in modern AI systems. Already functional and available for download, the app blends technology, spirituality, and moral philosophy to guide users through complex ethical choices. In this Version 2 enhancement phase, the focus is to: Refine AI reasoning and emotional intelligence. Integrate African ancestral wisdom (Ndapngong) for cultural depth. Apply theological and philosophical frameworks. Enhance UI/UX design and Android performance. Add a health and medical ethical model to expand real-life impact. This phase centers on enhancement, optimization, and expansion to make MoralityCode more intuitive, inclusive, and transformative.
Task description	Ethical Programming Support – MoralityCode Mobile App Enhancement (Phase 2) Action Lab for Development Association is seeking Three (3) online volunteers to contribute to the enhancement of the MoralityCode Mobile App (Version 2)—an innovative ethical decision-making tool that integrates moral philosophy, emotional intelligence, and a health and medical reasoning model. The app is already functional and available for download. This second phase focuses on improving user experience, enhancing interface responsiveness, refining the AI/ML reasoning engine, and expanding philosophical content depth. Each online volunteer will be assigned a distinct enhancement area following a one-task-per-volunteer principle to ensure clarity, accountability, and measurable impact. Volunteer Support Roles Volunteer 1 – Backend & Data Systems support Objective: Strengthen backend performance, data structure integrity, and system efficiency. Tasks: • Build a robust data validation pipeline to enforce dilemma and content structure integrity. • Introduce a caching layer to improve performance for frequently accessed data. • Optimize database queries and backend logic to reduce latency and improve scalability. • Support integration of backend services with AI/ML components for seamless data flow. Volunteer 2 – Frontend, UX & Design System support Objective: Improve user interface quality, accessibility, and overall user experience. Tasks: • Improve adaptive UI features, including accessibility, responsiveness, and personalization. • Enhance navigation flow and interface consistency across all screens. • Add offline-first functionality with data synchronization when connection is restored. • Assist in designing a support system to improve engagement, including comments and community interaction. Volunteer 3 – Intelligence, Security & DevOps support Objective: Enhance system intelligence, security, and deployment reliability. Tasks: • Set up a CI/CD pipeline with automated testing and deployment processes. • Introduce role-based access control (RBAC) with secure authentication upgrades. • Strengthen application security, including data protection and access validation. • Support integration between AI/ML reasoning systems and ethical decision modules. Key Outcomes - A more stable, scalable, and technically enhanced MoralityCode Mobile App. - Improved UI responsiveness, usability, and accessibility across devices. - Stronger AI reasoning integrating ethical and medical perspectives. - Expanded philosophical and intercultural moral content for global users. - Contribution to the “Ndapngong” Knowledge Engine. Additional Notes - All volunteers will work remotely and focus exclusively on enhancement and optimization tasks. - External outreach, release management, and organizational coordination will be handled by the internal Action Lab for Development team. - Each volunteer must have access to a laptop and a stable internet connection.

DOA Requirements

DOA Requirements

Required education level Bachelor's degree

Area(s) of specialisation

Required experience

Required skills and experience	Holder of a Bachelor’s degree or equivalent experience in Computer Science, Software Engineering, or a related field. Area(s) of Specialisation: App Development, Software Engineering, Mobile UI/UX. • Proficiency in Python (Intermediate to Advanced) • Experience with VS Code and Jupyter Notebook • Proven skills in app development and deployment • Hands-on experience with Kivy and Buildozer • Understanding of Google Play Store submission process • Interest in human-centered, ethical, or spiritually-informed technology • Self-driven, collaborative, and detail-oriented • Respect for Indigenous and Canadian or African cultural traditions • Relevant technical, research, or cultural knowledge for your role • Interest in human-centered, ethical, or spiritually-informed technology • Self-driven, collaborative, and detail-oriented • Respect for Indigenous and Canadian or African cultural traditions • Familiarity with Canadian and African spiritual or moral traditions is a plus

Language

Language	Language skills	Language requirement
English	Fluent	No

Area of Expertise

Software development
Art, design, culture
Data science, information management, Artificial Intelligence

Other information

Volunteerism is understood as a wide range of activities undertaken of free will, for the general public good, for which monetary reward is not the principal motivating factor.
